IN THE CLAIMS

BEST AVAILABLE COPY

1.-10. (Cancelled)

- 11. (Original) A vehicle driveline and warning system comprising: a clutch, and a sensor for monitoring clutch slippage;
- a control for receiving a signal from said sensor indicating a clutch slippage, said control communicating with a warning device to provide a warning to an operator of said clutch slippage; and

said control being operable to change said warning should said clutch slippage continue over time.

- 12. (Previously Presented) The system as set forth in Claim 11, wherein said control provides an increase in frequency of said warning if said clutch slippage continues to occur.
- 13. (Previously Presented) The system as set forth in Claim 12, where said increase in frequency occurs if said clutch slippage continues to occur over time.
- 14. (Previously Presented) The system as set forth in Claim 12, wherein said increase in frequency occurs if said clutch has an increasing temperature.
- 15. (Cancelled)
- 16. (Original) A method of operating a clutch comprising the steps of:
- (1) monitoring a clutch for slippage, and providing a warning should slippage be detected;
- (2) continuing to monitor said clutch for clutch slippage, and changing the nature of said warning should said clutch slippage continue to occur.
